

Smart Solutions for the Professional

SMARTLINE

CONTRA COSTA WATER DISTRICT 'SMART'
SPRINKLER TIMER PROGRAM

Commercial weather-based landscape irrigation controller specifications:

Communication Method: SmartLine controllers are continuously in real time communication with the SLW Series On-Site Weather Monitor for immediate notification of a rain event and up-to-the-second weather updates including freezing conditions.

Support: Distributor and Contractor tech support is available free of charge at 888-4 THE PRO or www.weathermatic.com.

Warranty: Weathermatic's SmartLine is warranted two years from original date of sale on all defects in materials or workmanship.

Installation: A SmartLine certified contractor is recommended for proper installation.

Signal Fee: None

Programming: Initial programming is recommended by a SmartLine certified contractor for proper initial set up. A Quick Start programming guide for both Standard and Auto Adjust mode is provided with each controller along with an Owner's manual.

Maintenance: None

Programming Flexibility: SmartLine has multiple programs and start times per program for custom programming and it also allows the user their choice of weekdays, odd/even days, or interval watering schedules.

<u>12-Zone</u> 1-SL1600 controller 2-SLM4 modules 1-SLW20 weather monitor	Base 4-zone controller with 2 4-zone expansion modules and On-Site Weather Monitor	\$330.48 - \$550.80	8.25%	n/a	\$357.74 - \$596.24		
<u>16-Zone</u> 1-SL1600 controller 3-SLM4 modules 1-SLW20 weather monitor	Base 4-zone controller with 3 4-zone expansion modules and On-Site Weather Monitor	\$358.65 - \$597.75	8.25%	n/a	\$388.24 - \$647.06		
<u>20-Zone</u> 1-SL1624 controller 1-SLM4 module 1-SLW20 weather monitor	Base 16-zone controller with a 4-zone module and On-Site Weather Monitor	\$410.28 - \$683.80	8.25%	n/a	\$444.13 - \$740.21		
<u>24-Zone</u> 1-SL1624 controller 1-SLM12 module 1-SLW20 weather monitor	Base 16-zone controller with a 12-zone expansion module and On-Site Weather Monitor	\$490.08 - \$816.80	8.25%	n/a	\$530.51 - \$884.19		

SMARTLINE Controllers and On-Site Weather Monitors

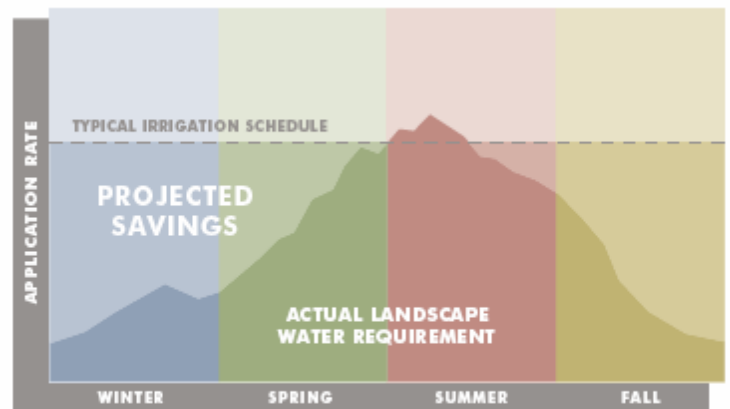

Truly Smart, Truly Automatic

Now your landscape can be healthy and beautiful year-round while your water bills can be more manageable than ever! The award winning SmartLine controller combines state-of-the-art, patented technology with easy to use features making lawn and garden care simpler and smarter than ever. It's got all the features your contractor needs to ensure your landscape gets just the right amount of water it needs, where it needs it, and when it needs it.

For the ultimate in convenience, water savings, and landscape health, upgrade your SmartLine controller with an SLW Series On-Site Weather Monitor. The weather monitor readings and controller inputs for plant type and sprinkler type are used by the SmartLine controller to determine the **right amount of water for each zone** of your yard. No more guessing about how long your sprinkler system should run - SmartLine calculates it for you every day in real time so you can **protect your landscape investment and save as much as 20 - 50%+ on your water bill!** Plus, inputs for soil type and slope allow SmartLine to create run and soak cycles to **virtually eliminate wasteful runoff.** As an added bonus, the weather monitor has integrated rain/freeze sensing so you **never water in rainy or freezing conditions** and **comply with local regulations** requiring rain/freeze sensors.

SmartLine Features

- Easy programming with a single dial
- Dual mode operation - Standard mode waters based on user set run times or Auto Adjust mode waters based on actual landscape requirement (see graph) using weather data from the optional SLW Series On-Site Weather Monitor
- Optional SLW Series On-Site Weather Monitor includes rain/freeze sensing to comply with local regulations
- Large backlit LCD shows the watering days for the current week
- Modules allow you to add zones as your landscape changes
- Multiple programs and start times per program for custom programming
- Choice of weekdays, odd/even days, or interval watering schedules
- Non-volatile memory retains programs even when the power goes out
- Simple manual watering by program with the press of a button
- Tricolor LEDs visually confirm the status of your programs - red, orange, or green
- Seasonal % adjustment by month and by program allows automatic, preprogrammed watering schedule changes throughout the year (seasonal % adjustment is not used in Auto Adjust mode since actual weather conditions are used to set watering schedule)

Benefits of Water Management

- Omit Hours (example: 10 am to 6 pm) to comply with the law and avoid watering in the heat of the day when evaporation is high; Omit Days so you never water on lawn maintenance or restricted days; Omit Dates (example: July 4th so you never water on the day of an annual event)
- Rain Delay feature prevents watering for 1 to 7 days before resuming the normally scheduled operation
