

EFFICIENCY INCREASES WATER RELIABILITY

Through much of the recent uncertainty, one constant is the safety and reliability of your water service. We've endured public safety power shutoffs, a pandemic and now drought, yet your tap water remained on to fight fires, wash away germs and keep our communities humming.

This reliability is not by chance. Water is an essential service, and we design our system with local hazards in mind. Over the past

10 years, we've increased local water storage, built strategic fault crossings, added standby generators, and much more. During drought, your efforts in water efficiency increase local water reliability. For drought tips and updates, visit ccwater.com/drought.

SMART HOME WATER MONITOR REBATE

CCWD customers receive a \$100 instant rebate off the purchase of a Flume Smart Home Water Monitor. Measure real-time use, receive leak alerts and much more! Details at ccwater.com/rebates

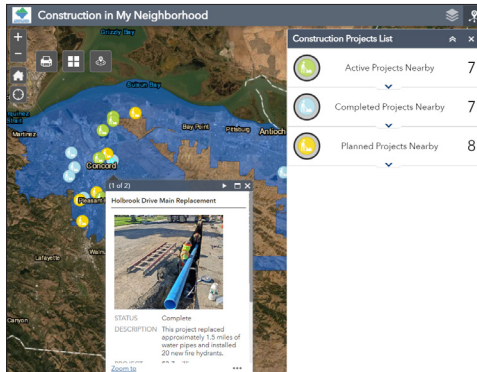

CLICK HERE FOR CONSTRUCTION

We're investing a lot of money to improve your water service reliability. Check out our new interactive map to see how your rate dollars are improving the public water system for generations to come! You can browse the map, search by address, or find projects near your location!
